# Sungrow with Solar Analytics.

Solar Analytics now offers a new way to access smart solar software for your system at a lower cost, via Inverter Integration.

Get more from your solar.

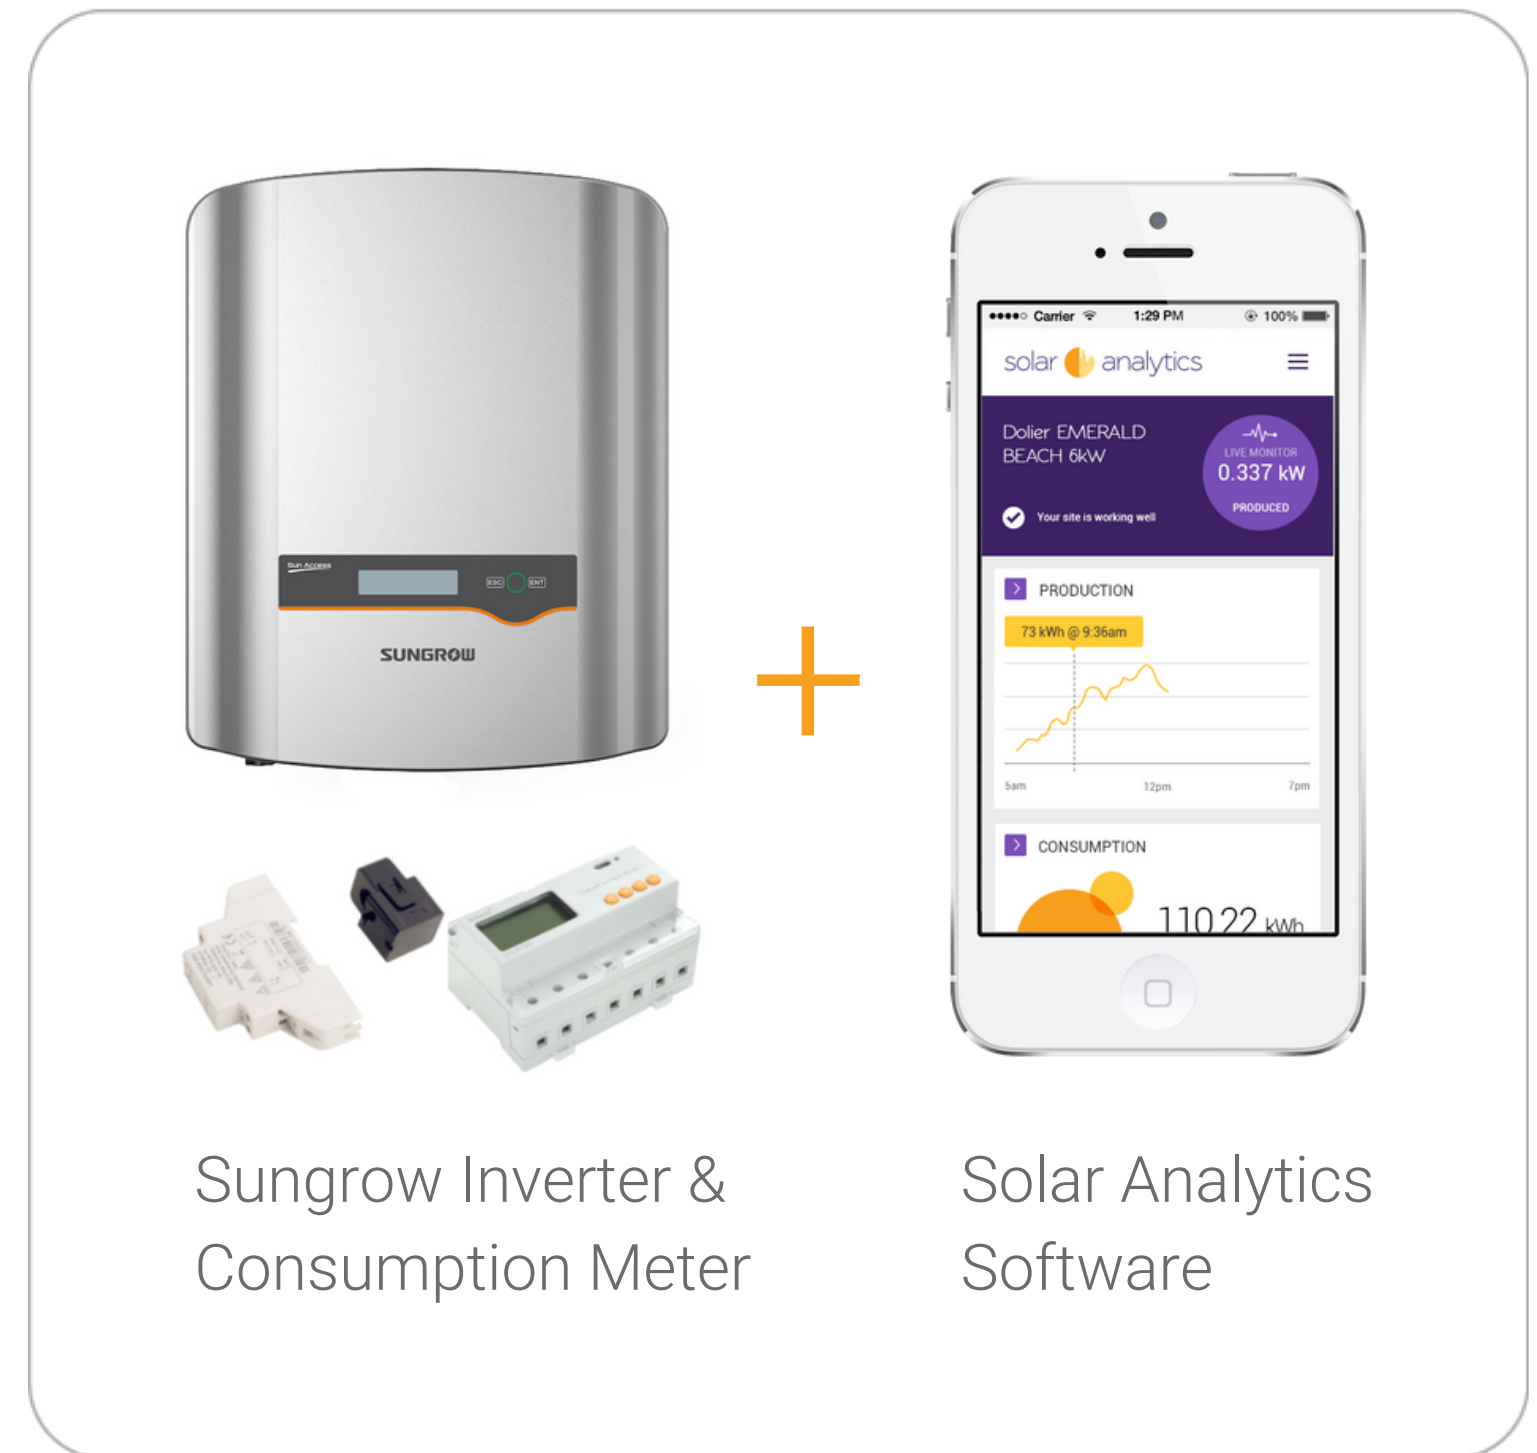

## Solar Analytics via Inverter Integration

Traditionally, we would collect your solar and energy data from a Solar Smart Monitor device installed in your meter board.

Now, we can also collect your data directly from your Sungrow Inverter and Consumption Meter.

The simpler data processing and lower communications costs of Inverter Integration means we can pass on savings to you with a lower cost subscription.

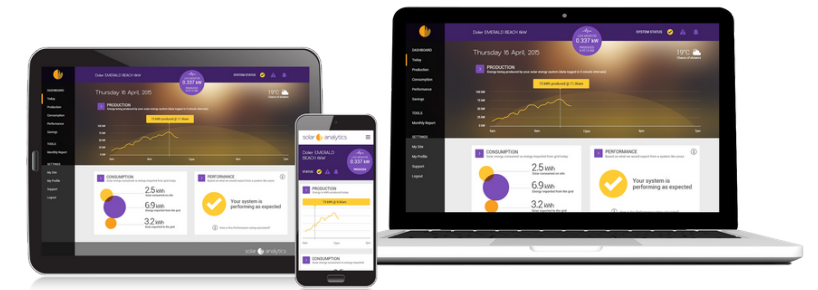

## How it works

The Sungrow inverter sends solar and energy data to the Sungrow iSolar Cloud via WiFi, Ethernet or 4G.

The data is sent from the Sungrow iSolar Cloud to Solar Analytics.

Solar Analytics receives the data and analyses using patented algorithms.

## Smart Solar Software

Solar Analytics via Inverter Integration helps you get more from your solar :

- Solar Analytics' proprietary Solar Performance Monitoring
- 5 minute data monitoring - solar production and energy consumption (with consumption meter)
- Solar savings/payback calculation (with consumption meter)
- Hybrid inverter and hybrid battery monitoring
- South Australian Relevant Agent export control

... all at a lower cost subscription.

## Solar Analytics subscription

A Solar Analytics subscription can be purchased from our solar retailer partners offering Sungrow inverters.

Small system  
(up to 15kW)

\$165 for 5 years

Large system  
(over 15kW)

\$325 for 5 years

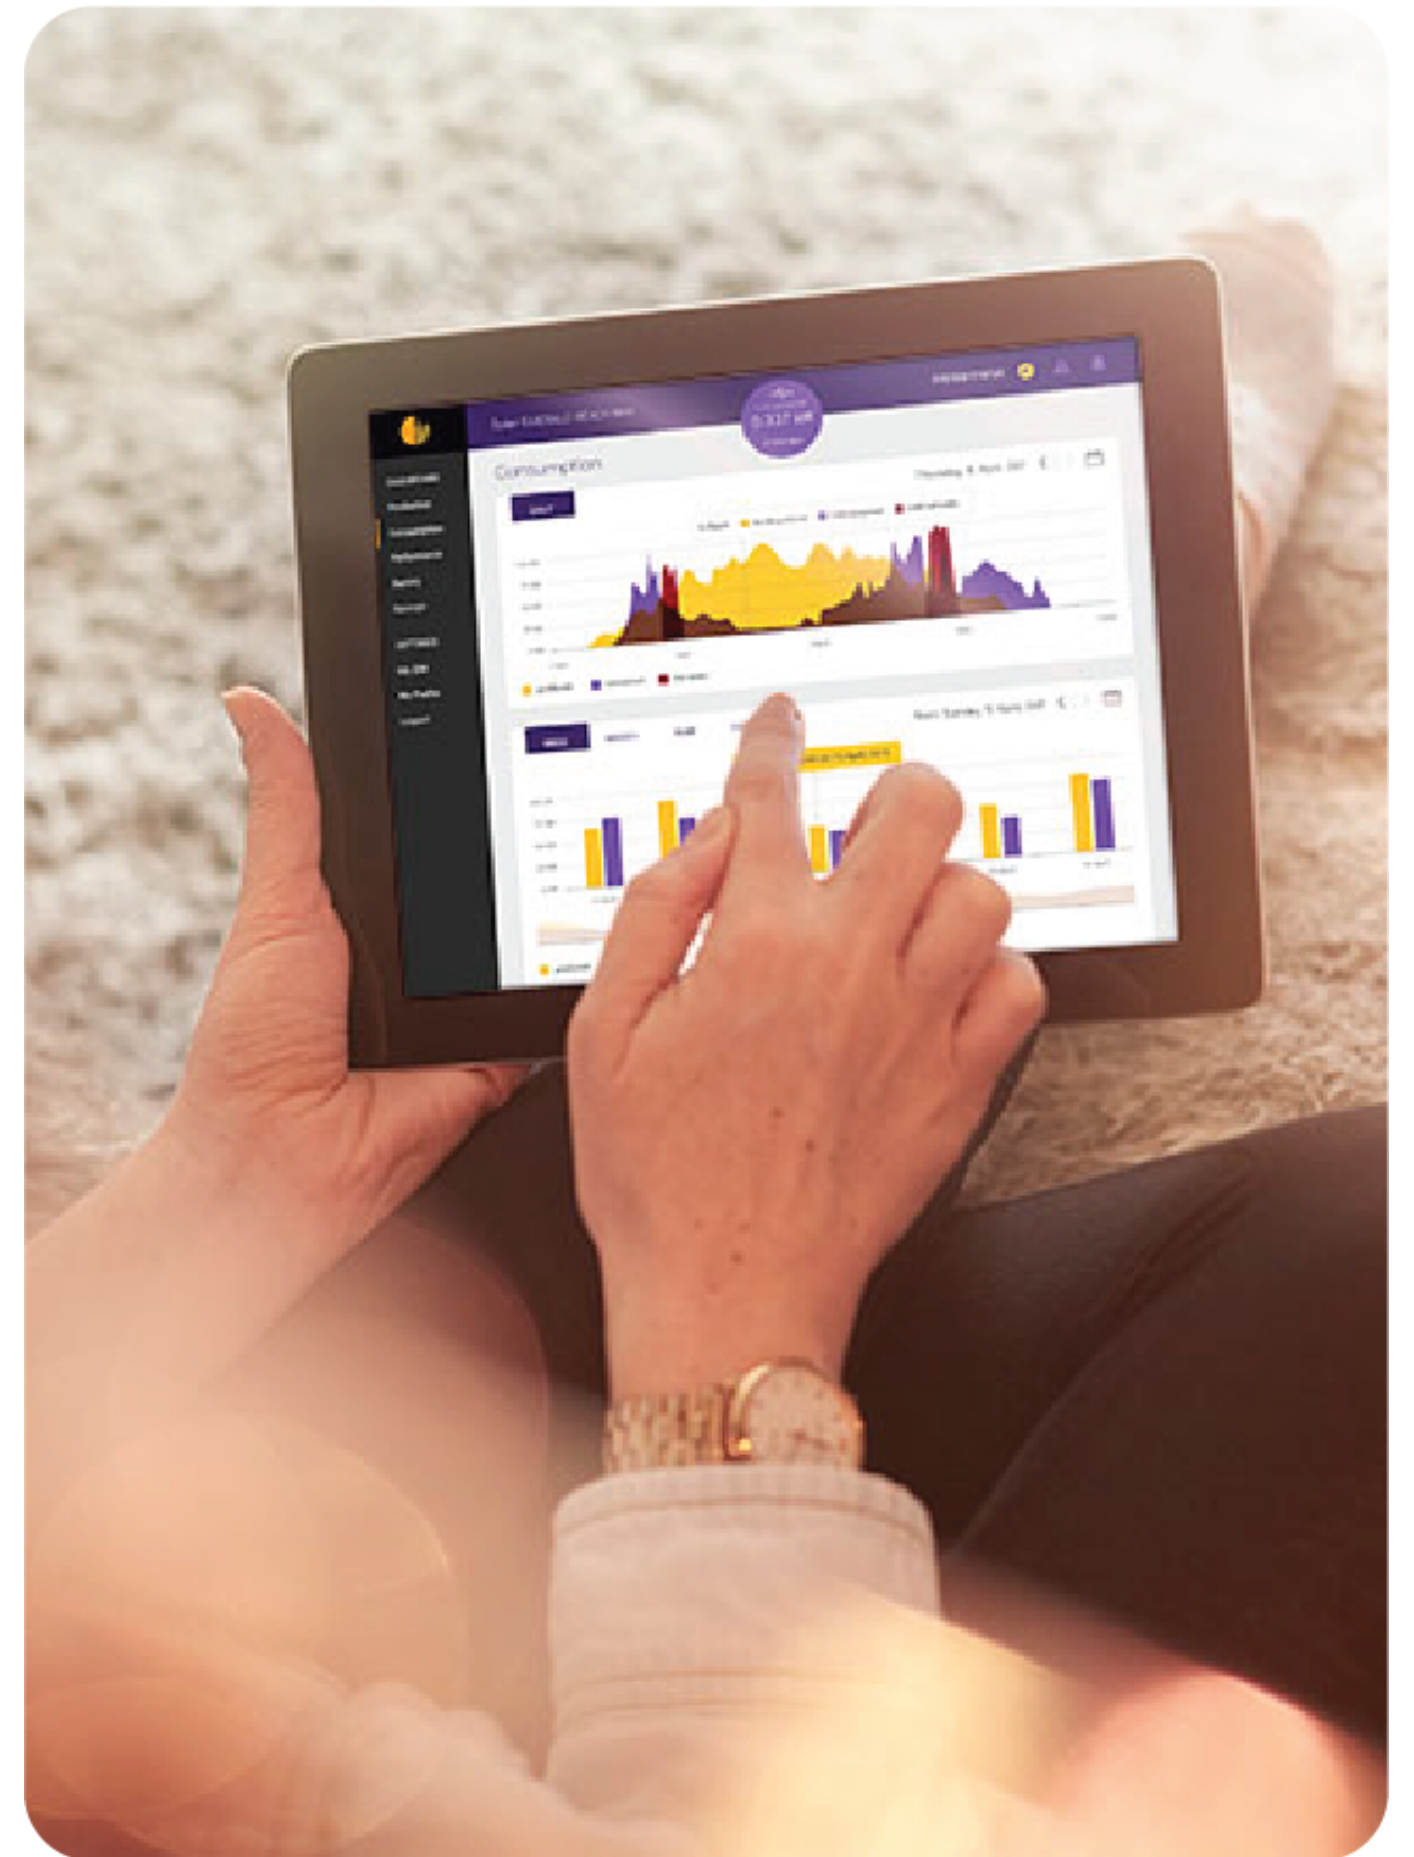

## Inverter integration availability

Inverter integration is available with all new residential Sungrow string inverters and a select group of older Sungrow inverters if you already have solar installed.

Ask your solar retailer for a quote for the Sungrow with Solar Analytics subscription + inverter consumption meter package.

Note: if you require five second data or more sub-circuit monitoring, ask your solar retailer about Solar Analytics' classic option - the Solar Smart Monitor.

Visit our website and learn  
how to get more from  
your solar.

### **About Solar Analytics**

Solar Analytics is a multi award-winning Australian software company helping more than 40,000 solar system owners to get more from their solar.
